

Quality and Outcomes – Broward Health North

This set of data provides information on the effectiveness and safety of procedures provided to stroke patients at Broward Health North.

TPA Within 60 Minutes

TPA within 60 minutes is the percentage of ischemic stroke patients receiving tPA (clot busting drug) during the hospital stay who have a time of arrival to initiation of tPA of 60 minutes or less.

Benchmark: American Stroke Association, Get With The Guidelines, **Florida Benchmark** (Jan-Dec, 2020) Data: Jan-Dec 2020 **Broward Health North**

Median time (Minutes) to tPA

Median time to tPA is the median time (in minutes) of arrival at the emergency department to time tPA (clot busting drug) is given.

Benchmark: American Stroke Association, Get With The Guidelines, **Florida Benchmark** (Jan-Dec, 2020) Data: Jan-Dec 2020 **Broward Health North**

Door to Groin Puncture Within 90 Minutes

- Percentage of patients with acute ischemic stroke who receive mechanical endovascular reperfusion therapy and for whom arterial puncture time \leq 90 minute after hospital arrival.

Benchmark: American Stroke Association, Get With The Guidelines, **Florida Benchmark** (Jan-Dec, 2020)

Data: Jan-Dec 2020
Broward Health North

Stroke Mortality Rate

Stroke Mortality Rate is the percentage of stroke patients whose death occurs within 30 days of admission to the hospital. If the death occurs past 30 days, but the patient has not been discharged, it is also counted.

Benchmark: Crimson Cohort Expected for Stroke Mortality Jan-Dec 2020

Data: Jan - Dec 2020
